

OUTDOOR SCREEN ROLLER BLIND FOR WINDOW

characteristics

Eclipse UNI screen shade is a shading system that also provides effective wind protection. In the summer months it will provide the ideal climate and protection from UV radiation. Perforated screen fabric allows for natural a pleasant outlook.

technical solution

The roller blind is made of full aluminum construction. The winding shaft is stored in two-parts aluminum cassette with a cross section of 8.5x9.5cm, allowing easy installation on window frame or into a niche.

control type

Spring loaded with preload (securing the lower bar to metal hooks)

properties

The Eclipse UNI shutter prevents overheating of the interior, retaining up to 90% of the thermal solar radiation. Ensure the release of a suitable amount of daylight - while allowing a pleasant and natural outlook. The Protective Layer of Metal Parts and the Certified Outdoor Fabric SCREEN 4010 guarantee high system durability in challenging outdoor conditions.

dimensions

Maximum size of the Eclipse UNI blind is:
width 250 cm x height 250 cm.

colours

Color design of the structure - possibility to choose any colour according to RAL scale (metallic colours at extra cost). Screen 4010 - selectable from 4 available colours.
